Math+Science Complex Gets Under Way at Mesa College

Before a crowd of about 250 students, faculty, staff and special guests, a ceremonial groundbreaking was held to mark construction of the future Math+Science Complex at San Diego Mesa College, the largest teaching and learning facility to be built on the campus and within the San Diego Community College District at 206,000 gross square feet.

The \$117 million, four-story complex will provide a state-of-the-art new home for transfer and certificate programs in biology, chemistry, physical sciences and mathematics. It will include classrooms, teaching and computer laboratories, and faculty and staff support space. Specialty spaces will include a greenhouse and astronomy observation center.
